Formula 1 Circuit Maps

Albert Park Circuit | Australian Grand Prix

- First Grand Prix: 1996 = Number of Laps: 58
- Circuit Length: 5.278km
- Race Distance: 306.124 km
- Lap Record: 1:20.235 Sergio Perez (2023)

The fast and flowing Australian Grand Prix circuit follows the roads around the **Albert Park Lake in Melbourne**. The Australian Grand Prix (GP) is considered one of the oldest events in the F1 calendar.

Australian Grand Prix Circuit Guide

I. General Information and History

- The Australian Grand Prix was held for the first time in **1928** during the pre-Championship era.
- It took time to reserve its spot, but the Australian Grand Prix was held for the first time as a championship event in **1985** and has since become a regular event in the Formula 1 Calendar.
- The event will stay in the championship up until **2035**, according to the current agreement between Formula 1 and race organizers.
- Before shifting to the current location in 1996, the event was held in 23 different venues.
- The Albert Park circuit is only used **once a year**.
- The circuit is categorized as a **street circuit**, utilizing public roads and the track inside the park.
- Compared to other street events, the Australian Grand Prix offers a **smooth and high-speed layout** which better suits modern F1 cars.
- The track surface, typical of a street circuit, needs time to provide the cars with grip as it starts out dusty. Grip improves throughout the weekend, with the ultimate grip peak usually reached in qualifying.

Circuit Dimensions

- The layout of Albert Park is **5.278 km long**.

- Drivers have to go **58 times** around the circuit to cover the race distance.

II. Driver Experience and Circuit Changes

Driver Commentary

- Melbourne is a special place for **Nico Rosberg**, who won there twice in **2014** and his World Championship year, **2016**. He has fond memories of the track.
- **Charles Leclerc** loves Melbourne; it is probably one of his favorite cities of the season.
- **Carlos Sainz** likes the track, but his favorite thing is the city.
- The food in Melbourne is good, the people are so nice, and it is a beautiful country.

New Layout and Track Modifications

The circuit has undergone changes resulting in a new layout.

- **Turn 1:** The curbs on the inside are being moved further in, making the corner **faster**. It is now expected to be taken in at least **fourth gear**.
- **Post-Turn 1 Section:** This part is very difficult, especially in the wet, where it can be very twitchy even though drivers need to be almost flat.
- **Turn 6 (Specific Change):** The inside curb has been moved quite far inward, making this corner much faster. It used to be third gear but is now expected to be **fourth gear** with a lot more speed.
- **The Biggest Change (Middle Sector):** A corner at the back has been **removed**, creating a **long straight**.
 - This section, which was previously flat, flat, flat, is now completely flat out (not DRS).
 - This long straight is a **huge opportunity for overtaking** due to the long slipstream. Overtaking down into the fast corner at the end of the straight will be "pretty hairy" if two cars are side-by-side.
- **Slower Corner Change:** Another corner later in the lap is having its curb moved **outward**, making it slower and giving it a bigger braking zone.
 - This is intended to create another opportunity to overtake.
- **Overall Impact:** The changes were made to make the race more exciting, hoping drivers can follow closer through the fast sections.

III. Detailed Circuit Guide (Previous and Modern Layouts)

2017 Layout Description

The Melbourne Grand Prix circuit is 5.3 km long.

- **Main Straight to Turn 1:** Drivers accelerate down the main straight, scrubbing off speed for Turn 1.
- **Turn 1 (Left-hander):** Carry as much speed as possible into Turn 2.
- **Turn 2 (Left-hander):** Overlooked by grandstands named after Australian Champions **Alan Jones** and **Jack Brabham**.
- **Turn 3 & 4:** Up through the gears, gaining speed towards Turn 3, preparing for a quick change of direction: flicking right then a quick left at Turn 4.
- **Turn 5:** Flat out through the right-handed Turn 5.

- **Turn 6:** Onto a short straight, preparing for another big direction change. A good exit is vital here as the power goes down again.
- **Turn 8:** Sweeping right.
- **Turn 9:** A sharp right that is tricky to negotiate.
- **Turn 10:** Drivers accelerate hard through this picturesque corner, with a **golf course on their left** and the **lake on their right**.
- **Turns 11 & 12 (Chicane):** A seat-of-the-pants high-speed left-right chicane. Drivers are still on the throttle coming down the short straight.
- **Turn 13:** A hard right.
- **Turn 14:** Swiftly followed by 14 and another short straight.
- **Turn 15:** The **90° left of 15** is one of the trickiest corners on the circuit.
- **Final Turn:** Drivers face one final turn before heading back onto the start/finish straight.

Modern Track Guide (F1 24 & F1 25 Setup and Technique)

Note: The setup is a general baseline for hot laps and races and should be tweaked to fit individual style.

Car Setup Priorities

Game Version	Setup Priorities
F1 24	Good balance and stability on the rear, and good front rotation into the corners.
F1 25	Medium speed cornering stability with minimal drag.

Sector 1 (Start/Finish to Turn 6)

Corner/Section	F1 24 Technique	F1 25 Technique
Turn 1 (Entry)	Break right between the 100m and 50m boards , or before the small patch of tarmac on the left. Full application of brakes. Start turning in just past the 50m board.	Watch the 100m board (right behind the black electronic flag sign). Break about one car length past the 100m board. Hard jab at the brakes, holding full pressure for one second, then immediately turn in (good idea to turn in under braking). Downshift to fifth gear .
Turn 1 (Apex/Exit)	Attack the apex; taking a lot of the inside curb makes T2 smoother. Cut the curb completely, leaving only left wheels inside track limits. At the apex, back on power (about 50% throttle).	Take as much inside curb as possible. Aim to steer onto the left exit curb/green tarmac (completely safe). Stomp the gas at mid-corner (safe due to good balance/traction). Ride the green tarmac until the track shifts right.
Turn 2 (Left-hander)	If T1 line is proper, no track limit issues. Full Throttle before reaching the curb. Use as much curb as possible without going over track limits (completely safe).	Extend to the curb on the right side to gain time, but avoid tapping the wall.

Corner/Section	F1 24 Technique	F1 25 Technique
Straight/DRS	Follow through to the right side, use the outside curb. Enable DRS.	Enable DRS at the line. Start naturally moving to the left side.
Turn 4 (Hard Braking)	Sway towards the left side. Break exactly at the 100m board (deeper braking zone than T1). Stay hard on the brakes longer. Start turning in after the left barrier ends. Avoid the inside curb (slanted, not great for stability).	Move towards the left side. Very hard jam of the brakes at the 100m board . Downshift to second gear . Trail braking is important; let off pressure approaching the corner.
Turn 4 (Apex/Exit)	Slowly get back on the power at the apex. Be consistent with throttle to avoid spinning. Sway out to the left side, increasing throttle. Increase to full power at the wheel straight.	Aim to brush right wheels on the inside curb. Increase power as you widen left, pulling back right. Shift to third, aggressively pull back left, aiming to cut close to the curb.
Turn 5 (Quick Right)	Pull towards the right side. Most effective method: 50% lift off the throttle once reaching the right side and turning in. Aim for the inside curb. Back to full throttle at the apex. Watch for track limits (easy to understeer off).	Give the gas a slight lift by about 50% before the left curb. Steadily increase back to full power at the apex. Sway out to the right; avoid reaching track limits until after the curb ends on the right (curb can easily bottom out the car).
Turn 6 (Sweeping Left)	Continue flat out; no need to lift or brake. Sway out to the left on exit to use the left exit curb. Prepare for the next corner.	Stay flat out.

Sector 2 (Turn 7/8 Complex)

Corner/Section	F1 24 Technique	F1 25 Technique
Turn 7 (High Speed Entry)	Stick to the right side, staying straight to position left for the corner. Break at about the 70m Mark (couple car lengths beyond the 100m board), but judging the corner is easier. Quick jab to 100% brake pressure; one or two downshifts. Throw the car aggressively into the corner.	Stick to the left side. For this high-speed corner, specific meter boards are distracting; judge based on the wall on the right side and braking power. Nailing entry/exit is extremely important for the long straight ahead.

Corner/Section	F1 24 Technique	F1 25 Technique
Turn 7 (Apex/Exit)	Back on the power before the apex. Flat out at the apex. Follow through left, use plenty of the curb (completely flat, safe).	Incredibly quick jab of the brakes to 100% pressure and immediately back on the gas. Downshift to sixth gear (fifth means you braked too much). Cut to the inside wall as much as possible; getting onto the grass is fine. At mid-corner, already at full throttle. Extend to the left on exit; careful not to exceed track limits.
Post T7/T8 Straight	Flat out off the curb, keep a straight line, aim right side, hug the right side. Sway toward the middle as the track twists right, pull back to the right. Enable DRS at the line. Hug the left side as the track moves left, transition right.	Exiting T7/T8, extend back to the right side, pull toward the right wall. Let the car naturally drift left, then pull back right as you hit the DRS zone. Enable DRS at the line. Pull back toward the left for the long left-hander, then transition to the right as the track opens.

Sector 3 (Turns 9 through Final Corner)

Corner/Section	F1 24 Technique	F1 25 Technique
Turn 9/10 (Chicane Entry)	Stick to the right side. Break exactly at the 50m board (not a heavy braking zone). Quick jab to about 50% brake pressure. Immediately turn in. Get back on power while turning in; 60-70% throttle. Take some inside curb.	Stick as close to the right wall as possible. Watch the 50m board, but focus on the apex (meter boards are distracting for high speed). Quick jab of the brakes, downshift to sixth gear . Take as much inside curb as possible, get back to 100% throttle ASAP .
Turn 10 (Exit)	Sway toward the middle, increase to full throttle. Pull back to the left side for a wider line through T10. Stay flat out, turn in right. Use T10 inside curb, avoiding track limits. Follow through to the left exit curb (fully usable). Continue flat out, enable DRS at the line.	Focus on the inside curb on the right. Pull to the left and follow the track just a split second longer than expected. Turn right as the white line ends. Stay full throttle, take inside curb without cutting limits, extend to left exit curb. Get back on the tarmac quickly (F1 25 punishes speed loss on curbs more).
Turn 11/12 (Next Braking)	Stick to the right, move left. Break pretty much at the 50m board (slightly before is okay due to lock-up risk). Full use of the brakes (100% pressure) . Turn in, hit the apex.	Enable DRS. Shift up to seventh then eighth, moving left. Break at 100m (right after the electronic flag sign). Slam brakes, use trail braking .
Turn 11/12 (Apex/Exit)	Avoid taking the inside curb (possible to bump the car). At the apex, get back on power and extend to the left exit curb.	Avoid the raised orange curb , but cut as close as possible. Mid-corner (second gear), start getting back on the gas and extend to the left side. Get back on the tarmac ASAP.

Corner/Section	F1 24 Technique	F1 25 Technique
Turn 13 (Right-hander)	Do not need to break; slight lift of throttle (down to 70%) for a split second. Turn in parallel to the inside curve (aim close to where the curve begins). Stomp on the power at this point and ride out. Naturally places car on the left side; use plenty of the exit curb.	Get up to sixth gear before the corner. Slight lift will do the job (previous games needed brake tap). Give gas a 50% lift , staying in sixth gear. Cut close but do not touch the inside curb (risk of spinning). Immediately back to full power, extend to the left exit curb.
Turn 14 (Sharp Left)	Sway right on the curb, watch for 50m board. Break a bit before the 50m board (easy to lock up). Full use of brakes; need to get slowed down. Rotate the front end smoothly; avoid touching the inside curb . At apex, slowly get back on power (not too much). Extend to the right side (around 50% throttle); do not spike the throttle.	Move back towards the right, watch for the orange barrier. Break about one car length beyond the barrier . Be as close to the right as possible. Easy to lock up: break hard but quickly release pressure as you turn in. Aim to take only the yellow and green curb , avoid the red raised curb. Mid-corner: second gear . Extend to the right side, keeping steering consistent.
Turn 15/Final Turn	Sway back toward the left almost immediately. Start turning into the corner on the left. Do not have to lift, but throttle control is important. Once the inside curb begins, increase to full throttle (feels aggressive but manageable). Power down, extend to the left curb, and enable DRS.	Pull to the left side; full throttle at this point. Start turning back to the right, aiming for the inside curb. Can be taken flat out with the right line (slight lift might be necessary if spinning occurs). Extend to the left side exit curb, use some curb, and enable DRS at the line.

IV. Planning Your Trip to the Australian Grand Prix

Travel and Logistics

Aspect	Detail
Air Travel (Recommended)	Use Melbourne's main airport in Tullamarine as it is positioned very close to the circuit. Numerous international airlines offer direct flights. Qantas, Virgin Australia, and Jetstar operate local flights.
Air Travel (Not Recommended)	Avalon airport is not a good choice as it is far from the circuit.
Long-Distance Travel	Plenty of local trains are available from other Australian cities (a budget-friendly option). Intercity bus services are available but not recommended due to large distances.
Local Transport	Shuttles, taxis, and Ubers are available within Melbourne City.

Aspect	Detail
Tram (Best Tourist Option)	The tram is the most attractive and easiest option. The service running directly to the circuit is totally free of charge during the Grand Prix weekend. Trams become crowded at the end of each day.
Private Vehicles	Not recommended. There is no dedicated vehicle parking for Albert Park, and strict parking restrictions apply in the vicinity of the circuit area.

Tickets and Viewing Experience

- Albert Park grandstands are **not raised** like those in other modern circuits, which limits the viewing experience.
- It is better to buy tickets for seats in a **higher row** for the best experience.
- All grandstands come with **giant screens** in opposite directions to provide optimum viewing.
- There are **12 Grandstands** to choose from.
- **Best Views:** The **Brabham** and **Jones** grandstands are generally accepted to have the best views.
- **Cheaper Option:** The **Schumacher** grandstand is the best cheaper option.
- **Premium Tickets:** Available for fans wishing to use the top of the Senna and Schumacher grandstands.
- **Children Tickets:** Cost **40%** of the normal ticket fee for each grandstand.
- **General Admission (GA):** Plenty of budget-friendly GA areas are available. Albert Park has built a reputation for having the best GA areas in F1, often offering better views similar to grandstands. There are no reserved seating options in GA areas.

Accommodation and City Exploration

Melbourne is an international city with a mix of global cultures and is a major tourist attraction in the Southern Hemisphere. Plenty of accommodations are available across various budgets and facilities.

Recommended Accommodation Areas

- **Melbourne CBD (City Center):** Has a good collection of hotels. Hotels here are generally a little bit expensive due to high demand. This area offers a **free tram car service**, providing greater accessibility to tourist destinations.
- **South Bank Area:** A good place to stay, offering a great **nightlife experience**. It is positioned next to the Yarra River, offering beautiful sceneries.
- **St Kilda:** The oldest **Beachside suburb** in Melbourne City. It offers a great selection of restaurants and nightlife. Normally, free trams operate to the circuit during the race weekend.
- **South Yara and Docklands:** Also recommended areas with a wide range of hotels and apartments that fit different budget levels.

Sightseeing and Culture

- **Sports History:** Visit the iconic **Melbourne Cricket Ground (MCG)** and the nearby **Australian Open tennis Arena** (both within walking distance of downtown). Step inside the **Australian Sports Museum** within the MCG grounds for insights into Australian sports history.
- **Wine:** Spend a day touring the renowned **Yarra Valley wine region**, home to some of the finest wine brands, enjoying the picturesque landscapes.

- **Wildlife:** Explore diverse marine life at the **Melbourne Aquarium**. See a wide variety of animals at the **Melbourne Zoo** (north of the city center). Try an off-road Safari Adventure at the **Werribee Open Range Zoo** (30 minutes from the city).
- **Day Trip:** Embark on a day trip along the **Great Ocean Road** to see breathtaking coastal scenery and iconic landmarks such as the **Majestic 12 Apostles**.
- **Dining:** Melbourne is a melting pot of different cultures and is world-famous for the quality and choice of its dining experience, offering a wide range of cuisines. This type of dining experience is unique compared to other cities that host Formula 1 events.

Visitor Tips

Topic	Detail
Electrical Devices	Foreign visitors must bring a universal power adapter . Visitors from the United States, Canada, or Japan must also bring a voltage converter .
Voltage	The main supply is 230 volts and 50 Hz (equaling the majority of Asia, Africa, and Europe).
Water	Melbourne's tap water is safer for human consumption and is defined as the world's safest drinking water.
Safety	It is recommended to keep your money and valuables close to yourself during your stay.
Experience	Australia provides the best conditions for an F1 fan to get the full experience of high-speed racing without stressing about outside environmental factors, compared to events in Europe.

Autodromo Enzo e Dino Ferrari | Emilia Romagna Grand Prix

- First Grand Prix: 1980
- Number of Laps: 63
- Circuit Length: 4.909km
- Race Distance: 309.049 km
- Lap Record: 1:15.484: Lewis Hamilton (2020)

The F1 Grand Prix Weekend Format

A traditional Formula 1 (F1) Grand Prix is a festival of excitement and entertainment that typically spans three to four days, culminating in the main race.

1. Practice Sessions The weekend begins with **free practice sessions** over a couple of days before race day. These sessions allow drivers and teams to:

- Learn the track.
- Experiment with conditions.
- Test different setups and configurations they plan to use in qualifying and the race.

2. Qualifying Following practice, the competitive element begins with qualifying. This is where drivers attempt to set the **fastest possible lap times** across three knockout sessions: Q1, Q2, and Q3.

- The driver who survives all Knockouts and sets the fastest time starts the race from the front of the grid, known as **Pole Position**.
- The remaining starting positions for the race are ordered based on the qualifying lap times set by the other drivers.

Race Details, Duration, and Scoring

Race Duration The duration of an F1 race is decided by a simple calculation.

- A Grand Prix distance is fixed at **305 km**.
- This distance is divided by the length of a single lap and then rounded up to a whole number to determine the number of laps for the race.
- The only exception is if stoppages cause the race to run over a **2-hour time limit**.

Scoring and Points Championship points are awarded to all drivers who finish in the top 10 at the end of the race.

- First place receives **25 points**.
- Tenth place receives one single point.
- An **extra point** is awarded if a driver sets the fastest lap of the race, but only if that driver finishes inside the top 10. Drivers outside the top 10 do not receive any points, even if they set the fastest lap.

Sprint Race Weekends

A few times per season, F1 uses a modified format called the **Sprint race weekend** at predetermined races on the calendar. This format differs from the traditional Grand Prix structure:

- Teams only have **one practice session** before the competitive elements begin.
- The reduced practice time makes way for two high-tempo sessions: **Sprint qualifying** and the **F1 Sprint**.
- Sprint qualifying determines the grid order for Saturday's shorter F1 Sprint race.
- The F1 Sprint is a shorter distance race designed to be run with **no mandatory pit stops**.
- The Sprint offers **extra points** that can be crucial in a tight championship. Only the **top eight finishers** in the Sprint receive points, and the points awarded are fewer than in the main race.

The Race Start Procedure

Getting an F1 race started successfully requires many moving parts and roles to work in harmony.

1. **Grid Preparation:** Cars are moved from the garages to the grid about 40 to 50 minutes before the race. Drivers place their cars into their determined grid slots, which were decided by the qualifying results. Mechanics and engineers maintain the cars while they sit on the grid.
2. **Formation Lap:** Once the start time approaches, the teams and crew return to the garage, and the cars start up. This begins the formation lap, which is a reduced-speed tour around the circuit. The formation lap allows drivers to check all systems, examine track conditions, and crucially, **warm up their tires and brakes**. F1 cars perform best when these components are at the correct temperature. During this lap, cars drive on the racing line in single file, avoiding dust on the dirtier sides of the track.
3. **The Start:** After the cars return to their correct starting positions, a green flag is waved at the back of the grid to signal readiness. Attention then shifts to the start lights above the start/finish line.
 - **Five red lights** come on one by one.
 - The race officially begins when those lights go out. Historically, green lights were used to signal the start, but they were removed because drivers learned they could react faster to the red lights extinguishing than waiting for the green lights to come on.
4. **Aborted Starts:** A race start may be aborted for various reasons, such as a car breaking down on the grid, a technical issue with the lights or timing equipment, or a drastic change in weather. If a start is aborted, the cars slowly lap the circuit, and no overtaking is allowed.

Visual Communication: The F1 Flags

F1 uses flags as the quickest, simplest, and easiest form of communication to relay key messages to all 20 drivers visually as they travel at high speed. This system is supported by trackside electronic boards and displays on the drivers' steering wheels.

Flag Type	Meaning and Action Required
Yellow Flag (Single Waved)	An incident is in the section of the track ahead. Drivers must reduce speed, be prepared to navigate a hazard, and no overtaking is allowed .
Double Waved Yellow Flag	Drivers must reduce speed significantly or be ready to stop due to a blockage or Marshalls on or beside the track. If waved during qualifying, drivers must abandon their current lap and visibly demonstrate they have slowed down.
Full Course Yellow (FCY)	Imposed by the Race Director, meaning yellow flag rules apply to the entirety of the track until further notice.
Yellow Flag with Red Stripes	Indicates a significant reduction in grip ahead, possibly due to oil spillage or excess water.
Green Flag	Signals that the track is clear to go racing; follows a yellow flag once the issue is resolved.
Red Flag	The circuit is deemed temporarily unsafe or unraceable. Drivers must slow down immediately, prepare to stop, and return slowly and carefully to the pit lane with no overtaking . The race is neutralized, preserving current race positions.
Blue Flag (Practice/Qualifying)	Indicates that faster cars are approaching or the driver is leaving the pit lane.
Blue Flag (Race)	Indicates that the driver is about to be lapped. The driver must allow the approaching car(s) to pass at the earliest opportunity.
Black and White Flag	Used for unsportsmanlike behavior, overly aggressive or unsafe driving, but most commonly for exceeding track limits . This serves as the driver's final warning before incurring a time penalty.
Black Flag with Orange Dot (Meatball Flag)	Warns a driver that their car has damage and they must return to the pits for repairs . Failure to enter the pit will result in severe penalties.
Full Black Flag	Signals that the driver is disqualified and must return to the pits immediately. Causes can include on-track behavior or a technical infringement by the team.
Checkered Flag	In practice and qualifying, it signals that time is up. In the race, it signals glory and is waved at the finish line to the driver who completes the race distance first.

Race Neutralization: Safety Cars

When an incident is too serious to be handled solely by the flag system, the Race Director may deploy a safety car.

1. Safety Car (SC)

- The SC enters the circuit from the pit lane.
- The car in first place must follow the SC at a reduced speed, and the rest of the pack follows behind.
- **No overtaking is permitted** under safety car conditions. Drivers must maintain approximately the same speed as the car ahead to keep the pack tight and moving slowly while incidents are cleared.

- When the incident is cleared, the SC returns to the pits. The leading car then controls and dictates the pace of the rest of the pack.
- Overtaking is forbidden until the car passes the **safety car line** (a white line usually at the beginning of the start/finish straight), creating a tense and strategic restart.

2. Virtual Safety Car (VSC) The VSC is another method used by the Race Director to neutralize the race when an incident occurs.

- The VSC is used for situations that do not warrant a full safety car but require more action than double waved yellow flags.
- It applies to the whole circuit and limits drivers to a **set slower, variable speed limit and lap time**.
- The primary benefit of the VSC is that it **preserves the gaps between cars**. If a full safety car were used, a leading driver's substantial lead would be erased as all cars are required to line up single file behind the SC. Under VSC, all drivers are capped to the same minimum lap time without a physical safety car on track, meaning the gaps are more or less preserved.

Why i F1

- I just love the Racing Games
- F1 is Engineering Marvel
- the joy of Speed Thrill and Symphony of Combinations of Gears, Brakes, Acceleration, Steering, Forsee & Planning, Maps
- It just feels cool
- also would love to Drive at actual Simulation Setup in future
- For that Great Experience ,i am just gaining knowledge of F1
- Hunger of Knowledge
